EC230ℓ

Fluid Warming Cabinet

Specifications:

The single-chambered warming cabinet is constructed with 20 gauge stainless steel exterior casing and door. Window door allows observation of inventory while the door is closed. The cabinet is warmed using the patented Halo Heat- low-heat-density electrothermal cable array. The cabinet is equipped with one (1) white, epoxy-coated wire basket, with a 12 liter capacity to accommodate most commonly used surgical fluids packaged in bags or bottles. The cabinet is furnished with four (4) 1-1/4" (31mm) non-skid rubber feet.

Special Information:

- Right-hand door swing is standard.
- Left-hand door is available as a special order.
- Stacking combinations listed under Options and Accessories.

Control:

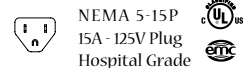

The chamber is controlled by one (1) electronic control which consists of a 4 digit L.E.D. display, ON/OFF key, heat indicator, INCREASE and DECREASE keys, integrated LOCK feature and a series of prompt sequence indicators. Individual temperature controls for irrigation fluids (IRR) and injection fluids (INJ) allow for precise temperature settings and can be easily set to operate in Celsius or Fahrenheit. The IRR temperature may be adjusted from 90° to 150°F (32° to 66°C), and the INJ temperature can be adjusted from 90° to 110°F (32° to 43°C). An alarm will sound if temperature exceeds 10°F (6°C) over the set-point temperature. In the event of a power failure, the cabinet will remember its programming and begin to operate as before. A warming shut-off system, separate from the electronic control, prevents overheating.

Capacity and Weights

Interior Capacity:	12 liters
Net Weight:	82 lb (37 kg)
Ship Weight:	112 lb (51 kg)

Electrical

120 V.A.C. 50/60 Hz, 1ph
